Experience

Internships

- SUMMER 2023 **Prof. Arnar Pálsson**, *University of Iceland*, Research Staff
Studied the syntenic of Histone genes for Salmonids, focusing on their arrangement and neighboring genomic regions.
- WINTER 2022 **Prof. Debabrata Goswami**, *IIT Kanpur*, Research Intern
I familiarized myself the basics of non-linear optics and its usage in optical tweezers for cessation of cancerous cells and microscopy.
- WINTER 2022 **Dr. Nagma Parveen**, *IIT Kanpur*, Research Intern
I familiarized myself with wet-lab methods for studying the mechanisms of viral action under varying external stimuli. I also began work on a protocol for the generation of pseudoviruses for SARS-CoV-2 based on an HIV-1 lentiviral packaging system with a luciferase reporter.
- SUMMER 2022 **Prof. Arnar Pálsson**, *University of Iceland*, Research Staff
Detailed analysis in a literate and reproducible manner for simulating a series of possible molecular evolutionary pathways for the *Salmolidae* using phylogenetic trees. This involved the five steps on an HPC (High Performance Computer) with literate programming visualization in R:
 - Data curation with NCBI databases
 - Homology inference using similarity measures (BLAST)
 - Multiple sequence alignment (MUSCLE5)
 - Alignment trimming (G-BLOCK)
 - Tree simulation with distance measures (BIONJ) and maximum likelihood approaches (RAXML-NG)

PROJECT REPORT: Computational Primitives for Evolutionary Paths ($\approx$ 147 pages)
- SUMMER 2021 **Dr. Lolitika Mandal**, *IISER Mohali*, Research Intern
Exploring Genetic Tools for working with *Drosophila* from a wet-lab perspective of data collection and analysis.
- Volunteer Work
- JUNE-AUGUST 2024 **pydSEAMSlib: Enhanced Python bindings for d-SEAMS**, *Google Summer of Code*, Student Developer
This was continuation of my last year's project. This project focused on improving the usability and accessibility of 'pySEAMS' by creating comprehensive documentation, refining the installation process, and integrating new features to make the tool more user-friendly
- JUNE-AUGUST 2023 **PYSEAMS: Python bindings for d-SEAMS**, *Google Summer of Code*, Student Developer
Developed Python bindings for d-SEAMS, a molecular dynamics analysis engine, enabling qualitative ice structure classification in confined and bulk systems. Refactored C++ code, removed lua bindings, and enhanced usability and functionality for MacOS users. Contributed to the seams-core engine and pyseams repository, improving documentation, automated testing, and code management. Gained skills in compiled languages, binding creation, open-source collaboration, and project management.
- 2022–PRESENT **IEEE P3173**, *IEEE Standards Committee*, Secretary
Am supporting the drafting the IEEE Standard for Endocrine Disrupting Chemical Hazard Labeling
